

Oleksandr Tokarev

Unity Developer (C#) | Gameplay, UI, Systems, Android/WebGL

Finland | Permanent resident | Open to relocate within Finland | On-site / Hybrid / Remote
oleksandrtokarevdev@gmail.com | Portfolio | GitHub | LinkedIn

Summary

- Unity Developer (C#) with 2+ years of hands-on experience turning scoped gameplay, UI, and systems tasks into playable builds for Android, PC, and WebGL.
- Shipped 1 Android title on Google Play and built multiple playable Unity projects with source code, gameplay media, and builds available for review.
- Strongest areas: gameplay logic, UI flow, scene/prefab setup, ScriptableObject configs, save systems, ads integration, debugging, profiling, object pooling, and build preparation.
- Looking to contribute to a production Unity team by implementing features, improving existing systems, communicating blockers early, and growing through real product delivery.

Skills

Core	Unity 6, C#, Gameplay Programming, UI Implementation, SOLID/SRP
Systems	ScriptableObject configs, event-driven UI, save/load, object pooling, data-driven progression
Gameplay	Combat systems, weapon systems, progression/reward systems, AI behavior, 2D/3D prototyping
Workflow	Scene/prefab setup, Git, debugging, profiling, project cleanup, build preparation
Platforms	Android, PC, WebGL, Google Play, itch.io, Unity Profiler, basic Netcode/UGS Relay/Lobby

Professional Experience

Unity Developer (C#) | Self-employed | 09/2023 - Present | Finland

- Shipped 1 complete Android title from prototype to Google Play release, implementing core gameplay, UI flow, AI logic, player progression, save data, monetization, and release setup.
- Implemented 5+ core gameplay and UI systems, including combat, progression, AI behavior, save/load, and scene-based features, using SRP/MVC-style separation to improve maintainability.
- Designed 3+ ScriptableObject-based data-driven systems for weapons, rewards, and configuration data to reduce hardcoded logic and speed up balancing.
- Improved mobile runtime stability by reducing Instantiate/Destroy usage, lowering allocations, and separating gameplay, UI, and popup logic.
- Delivered playable Unity projects across 3 platforms: Android, PC, and WebGL, including mobile arcade, first-person combat, procedural movement, cinematic sequences, and networked gameplay prototypes.

Projects

Force of Nature: Last Seed | 03/2026 - Present

- Preparing a 2D mobile auto-shooter for public Google Play release after closed testing, covering modular weapons, runtime modifiers, pooled projectiles, segmented enemy logic, reward choices, UI flow, and Android build setup.
- Designed ScriptableObject-driven weapon/reward systems with runtime modifiers to reduce hardcoded balancing logic and support faster gameplay iteration.
- Implemented pooled projectile handling, multi-section enemy hit logic, and deterministic reward/HP balance simulations using real weapon, reward, HP scaling, and DPS data.

Emoji Battle (Google Play) | 09/2025 - 02/2026

- Released a complete Google Play game with turn-based combat, AI opponent logic, player progression, save data, rewarded/interstitial ads, and MVC/SRP-style separation.
- Took the project from prototype to release, handling gameplay implementation, UI screens, AI behavior, data persistence, ad setup, and Android publishing pipeline.

Languages

English - Intermediate (B1, improving; strongest in written technical communication). Russian, Ukrainian - Native.
